Index to Communications of the ACM

VOLUME 10 • 1967

The Index is presented in three sections:

I. Bibliography
II. Author Index
III. Department Index

ENTRIES are included for technical papers, reports and articles that appear in the Contents listings of the twelve issues of the year, plus letters to the editor of technical content. Algorithms are indexed separately in the Algorithms department; the 1967 index appears on page 802 of this December issue.

THE REFERENCE NUMBER for each entry is a key to the year, volume, issue, and page number of the item.

THE AUTHOR INDEX gives authors' names listed singly. For papers by multiple authors, each author's name appears in alphabetical order. Thus the fact that an author's name is followed by the title of an article does not mean that he is necessarily the only author of that article; he may be one of two or more authors.

IN THE DEPARTMENT INDEX the year's contents are arranged under the following headings: *Communications* technical departments (in alphabetical order); special reports; proceedings issues; and letters to the editor (of technical content only).

ACKNOWLEDGMENT. Appreciation is expressed to Dr. Aaron Finerman, director of the Computing Center of the State University of New York at Stony Brook, for generosity in providing computer time, and to Mr. Mark Feldman, student assistant at the Computing Center, for his time and interest in developing the program which produced this Index.
